Course content and the structure of the course
The course covers exogenous and endogenous growth, mostly in a deterministic setting. We will study the Solow-Swan model, the Ramsey growth model with infinitely lived optimizing agents, overlapping generation models without and with altruism, fiscal policy models with human capital, basic AK models of endogenous growth, two seed

This will serve as an introduction and link to EC751.

Grading, exams, and tutorials

The evaluation of the students will be based on a Term Exam (40% of total grade) and a Final Exam (60%).

Midterm Examination (tentative): Thursday, October 11
Final Examination:
